

# The Castle Window System

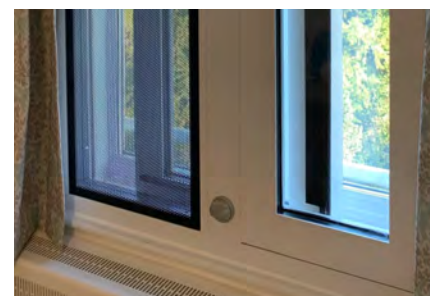

Patent Pending

## OVERVIEW

The Castle is our flagship window system. The main advantage of this window is its unique flush casement. This allows us to have the glazing beads and gaskets to the outside of the window keeping the design anti ligature while retaining unrivaled maintenance and re glazing costs. In secondary glazed situations the re glazing of a secure anti ligature window would require the removal and dismantling of the whole window. The Castle window system can be re glazed by hospital maintenance or even a 24 hour glazier, meaning rooms are out of out of commission for shorter times. In particularly volatile areas such as seclusion we can supply reserve double glazed units to be stored on site to reduce the repair time further. The Castle window system can be fitted in both full replacement and secondary glazed situations

## FEATURE LIST

- Anti ligature design
- Anti ligature service user operation
- 8mm triple layered secure laminated glass CE certified
- Strong heavy sectioned aluminium construction
- CE certified systems
- Fully thermally broken system
- Suitable for full replacement installations
- Suitable for secondary glazing installations
- Removable mesh for cleaning and maintenance
- PPC Powder coated finish available in any RAL colour
- Externally beaded
- No accessible internal gaskets
- Flush casement glazing to reduce maintenance costs
- Easy installation
- Easy to re glaze
- Reduced repair timescales
- Low maintenance costs
- Every part of the window frame and glass can be easily cleaned, even in secondary glazed and high rise situations
- Patent pending

1200mm wide x 1000mm high
